

QUANT · ENERGY MARKETS · AI ENGINEERING

Siddharth Sunil Bhosale

Master's student in AI Engineering at THI (Germany), focused on **quantitative risk, energy-market forecasting, and algorithmic trading**. This portfolio collects my core GitHub projects linking *ML, LLMs, quantum, and trading*.

Location: Ingolstadt, Germany

Focus: Energy markets, risk, AI & LLM tooling

GitHub: github.com/bhosalesiddharth30

PORFOLIO

Quant, Energy & AI Projects

Filter by theme or click on any card to expand details. Projects are ordered with the most recent work at the top.

Latest · Azure Risk Pipeline

Risk Metrics ETL & Validation Pipeline (Azure + Streamlit)

Production-inspired ETL + validation pipeline for risk metrics (P50/P95, spreads, deltas, vol) using simulated Azure ingestion, YAML validation rules and a Streamlit monitoring dashboard.

Python, Azure Functions (sim), Pandas, YAML rules, Streamlit

[GitHub Repo →](#)

Click card to toggle more details.

Risk · Regulatory

Regulatory VaR & ES Backtesting Engine

VaR backtesting engine with Basel-style traffic-light backtesting, Kupiec test and automated risk diagnostics for trading portfolios.

Python, NumPy, SciPy, Matplotlib, Risk Backtesting

[GitHub Repo →](#)

Good showcase of classical quant risk skills.

Equity · Research Automation

Equity Research Data Automation Dashboard

Automated equity + macro data pipeline with anomaly detection and Excel-style dashboards for faster research and cleaner inputs for valuation models.

Python, Pandas, Excel / Power Query, Power BI / Charts

LLM × Quantum

LLM-Guided Quantum Optimization Framework

End-to-end framework that converts natural-language optimisation tasks into QUBO formulations and solves them with QAOA-based quantum circuits.

Python, Qiskit, PennyLane, LLM Tooling, QUBO / QAOA

[GitHub Repo →](#)

Bridges between analytics teams and Excel-heavy users.

[GitHub Repo →](#)

Good conversation starter for future-tech / research teams.

Energy · Forecasting

Probabilistic Transformer – Power Market Forecasting

Quantile-based Transformer model to forecast day-ahead electricity prices for the DE-LU power market using ENTSO-E data and probabilistic calibration.

[Python](#) [PyTorch](#) [Transformers](#) [Quantile Loss](#)
[ENTSO-E](#)
[GitHub Repo →](#)

Shows deep learning applied to real energy data.

Energy · NLP

Energy-Market Sentiment Analysis & Price Forecasting

Trading framework combining FinBERT-based sentiment on news with power fundamentals to forecast EPEX DE-LU day-ahead prices.

[Python](#) [FinBERT](#) [NLP](#) [Power Fundamentals](#)
[GitHub Repo →](#)

Nice bridge between NLP and commodity trading desks.

Equity · Pairs Trading

Cointegration Strategy – HDFC vs ICICI

Classical statistical-arbitrage pairs trading strategy built on cointegration between HDFC Bank and ICICI Bank equities.

[Python](#) [Statsmodels](#) [ADF / Johansen](#)
[Z-Score Signals](#)
[GitHub Repo →](#)

Core quant skill: cointegration & mean reversion.
